

In September 2006 our school joined the BSP schools – the schools working on one of the UNESCO flagship projects, the Baltic Sea Project. We will join certain programmes of the BSP, promoting ecological and environmental activities and lifestyles, cultural diversity and education for sustainable development.

BSP PROGRAMMES:

- Water Quality,
- Air Quality,

- Rivers,
- Bird Ecology,
- Coastwatch,
- Environmental History,
- Phenological Studies,
- Oicosophy.
- The programme also includes all other activities promoting environmental protection, education for sustainable development, cultural diversity etc.

As our school is situated far from the Baltic Sea, we can take part in the following programmes: Rivers, Bird Ecology, Air Quality, Environmental History and Phenological Studies.

The project will be in the first place worked on during the **ecological education classes**, but also during all kinds of extra-curricular activities, trips, tutorials, and Science and Environment lessons.

It may be researched by students regardless of their age.

Once every three months a report of the school's activities will be sent (along with interesting pictures) to the National Coordinator. Interesting articles will be published on the BSP website and the national newsletter. The chosen articles will be sent to the General Coordinator for publication in the international BSP Newsletter, which is published a few times a year. Some of the latest issues of the Newsletter can be found in the school library.

Articles, reports, pictures etc should be passed on to the school liaison teacher, Ms. Anna Milerska
